

Rudam Commerce OS

For Meesho, Amazon & Flipkart sellers

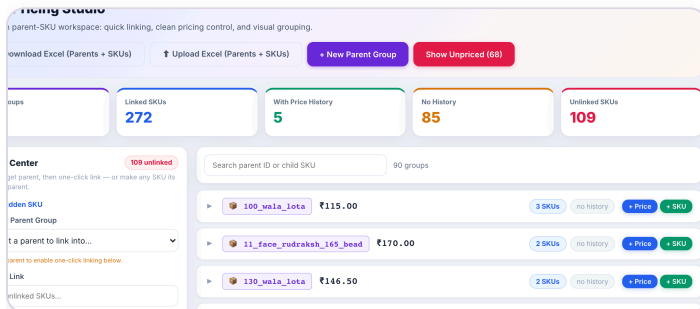

First year free

Run the whole shop from one screen.

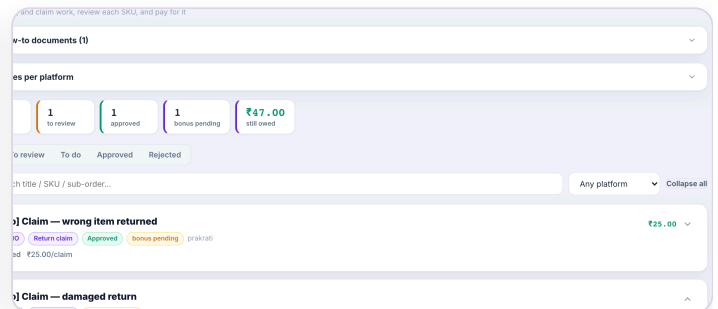

Upload the exports you already download from the marketplace. Rudam turns them into **true profit per SKU** — after commission, shipping, returns, ads and GST, against what the stock actually cost you. Not an estimate you typed into a spreadsheet.

Overview — profit, settlement and every order outcome for the period, in one glance.

SKU Pricing — group variants under one product; price once, applies to all.

Team Tasks — hand out work, approve each SKU, pay from an auditable wallet.

WHAT IT DOES FOR YOU

Know what you actually made

Profit per SKU, per order, per month — with ads cost attributed to the SKUs that sold. Loss-makers surface before they eat the month.

Nothing unshipped leaves the building

Scan each parcel at the packing desk. Anything cancelled, already shipped or scanned twice is stopped before it goes in the courier bag.

Stop losing claim money to the clock

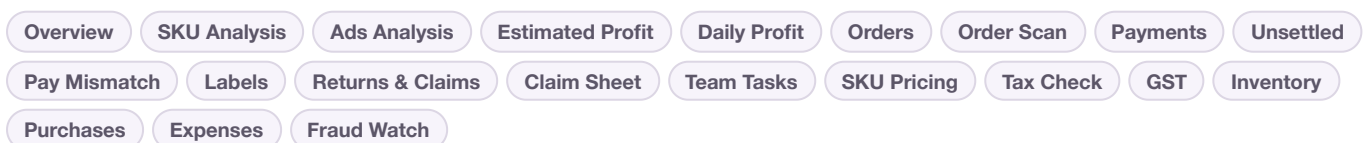

Every return opens a 7-day claim window. Scan the packet as evidence, watch the countdown, and reconcile what the marketplace actually paid.

GST that reconciles

Tax collected on sales, less tax already paid on the stock that sold — so you know what you owe before filing, not after.

21 MODULES, ONE LOGIN

1 Send us your exports
The payment file and orders CSV you already download.

2 We set you up
Usually the same day. Nothing to re-enter.

3 See your real numbers
Profit, claims, GST — from day one.

Talk to a person, not a ticket queue
